BRIEFING TO THE MEDIA ON CABINET DECISIONS TAKEN DURING THE CABINET MEETING HELD ON MONDAY 17TH SEPTEMBER, 2018 AT STATE HOUSE, ENTEBBE

Cabinet sat yesterday Monday 17th September 2018 at State House Entebbe under the Chairmanship of H.E the President, and;

1. Noted that Uganda will host the 9th High Level Meeting of the Regional Oversight Mechanism of the Peace, Security and Cooperation Framework for the Democratic Republic of Congo and the Region on 8th October, 2018 at the Commonwealth Resort Hotel Munyonyo, Kampala. The Meeting is expected to achieve the following objectives:

- (i) To maintain H.E the President's strong leadership in dealing with issues of Regional peace and security;
- (ii) To commit to the neutralization of negative forces and restoration of peace, security and stability in Eastern Democratic Republic of Congo (DRC) and the Region;
- (iii) To facilitate economic activities and trade to flourish between Uganda and the Eastern DRC;
- (iv) To mobilize the Region and the InterNational Community in supporting efforts to stabilize Eastern DRC and the Region; and
- (v) To contribute to maintaining Regional and InterNational peace and security.

2. Approved the National Broadband Policy for Uganda. The Policy has the following objectives;

- (i) To avert duplication and wastage of resources in the provision of broadband among the key stakeholders in the ICT Sector;

- (ii) To optimize usage and increase efficiency of broadband infrastructure utilization in the country;
- (iii) To ensure countrywide coverage of network, as opposed to the current concentration in the urban settings; and
- (iv) To review the licensing regime for the Telecom and broadband operators to ensure that their operations are in line with the ICT Sector Strategic Objectives. The following will now form part of the licensing conditions for Telecoms;
 - a. **National coverage** - Every operator that seeks a National operator license must be able to cover the entire geographical place of Uganda so as to enable universal access, promote effective competition and quality of service.
 - b. **Spectrum management** - The spectrum being a scarce and finite government resource, needs to be managed and utilized efficiently, optimally and rationally. These resources should not be owned by the private telecom service providers. This is also intended to outlaw hoarding of spectrum and enable realization of economic value of the spectrum through spectrum re-farming. The principle for all operators will be 'use it or lose it' and no operator whenever selling its stake through 'Mergers & Acquisitions' should never have a claim on spectrum. The policy also aims for unbundling of spectrum and license.
 - c. **National roaming** - Roaming refers to the ability of a customer to automatically make and receive voice calls, send and receive data, or access other services, even when travelling outside the geographical coverage area of his service provider, by means of using the service of the other service provider's network.

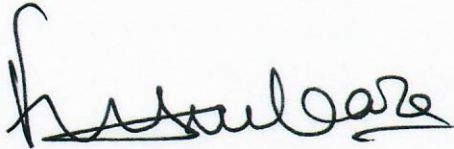

Currently within the country, customers of one service provider cannot access the ICT services of the other service provider. The policy aims to enable customers to have a seamless access and coverage for the customers irrespective of their network. This will ensure universal access to ICT services.

- d. Number portability** – this refers to the possibility for subscribers to retain their telephone number when changing network operator or when changing geographic location. Currently the customers cannot switch from one service provider to another without changing the telephone numbers. The policy aims to empower the customers to choose their service provider without the challenge of changing telephone numbers.
 - e. Structured renewal of license** – Currently there is no clear policy for renewal of all licenses yet some licenses stipulate automatic renewal on expiry of the current license. This policy aims to provide for a structured renewal framework for the licenses taking into consideration the roll out obligations, quality of service and technological developments.
 - f. Local Listing** for all telecom operators as a licensing condition will help mitigate capital flight among other benefits of local content development opportunities that come along.
3. Was briefed and noted the process of the renewal of MTN Uganda's Operator License for a period of ten (10) years. The Minister of ICT and National Guidance was given a go ahead to give a No Objection to Uganda Communications Commission to renew the license with new stringent terms in pursuit of the Broadband Policy Goals. Cabinet also tasked the minister of ICT and UCC to work with the Attorney General to ensure that

September 18, 2018

the operator license for MTN has clear terms and conditions that aim at ensuring quality of service. It was further noted that when the then Minister of Works and Communications issued the first license to MTN in 1998, the challenges then were different. The concern then was more about telephony penetration which MTN and other operators helped to achieve. The license conditions then were not stringent enough about quality of service obligations as demand and uptake of voice and data service was low. The concerns of today are mainly about reliability and affordability of services.

4. Approved the proposed charges for specialized services to be provided by the newly constructed Mulago Specialized Women and Neonatal Hospital.
Details of this will be communicated in due course by the Minister of Health.

Frank K. Tumwebaze, MP
**MINISTER OF ICT AND NATIONAL GUIDANCE/
CABINET SPOKESPERSON**
